C. H. VILAS, M. D.,

*Professor of Diseases of the Eye and Ear.*

# CLOSING EXERCISES OF THE SPRING TERM.

---

The Closing Exercises of the Spring Term of the Hahnemann Medical College and Homœopathic Hospital of Chicago, took place at the Grand Pacific Hotel on the evening of May 11, 1877. A large number of invited guests from abroad, as well as from the city, assembled in the spacious parlors of the house previous to the throwing open of the banqueting hall, and improved the opportunity of making many new acquaintances and indulging in social conversation.

At 9:30 P. M. the doors of the dining-room were opened and the procession, led by the Trustees and Faculty, took the places assigned them at the table. After a somewhat lengthy discussion of the good things provided, the President of the College, Dr. A. E. Small, called the assemblage to order, and announced that a few brief speeches would be in order. Upon this, the Dean of the Faculty, Prof. Ludlam, called upon the President to respond to "Hahnemann Medical College," in answer to which call Prof. SMALL spoke as follows:

#### LADIES AND GENTLEMEN:—

Like a good old-fashioned ship, thoroughly repaired, Hahnemann Medical College is still accustomed to make her annual voyages, well laden with passengers, and managed by a loyal and trustworthy crew. She has withstood the tides and encountered the gales for the last eighteen years. She has overridden the waves and pursued her course against adverse winds, and at the terminus of each voyage has safely landed a portion of her passengers on high professional grounds. In all, including men and women, she has landed four hundred and eleven passengers at the very point they had intended to reach; and what is better, the most of them have found homes ready and waiting for their professional occupancy. From year to year she has been renovated and improved until her present

appointments consist of the most modern facilities and achievements that can adorn her quarters. She has a well furnished apartment for the ladies under the superintendence and direction of a polite, graceful, and respectful servant, who always knows and keeps his place. She has another apartment for children, to which is attached a broad and pleasant "HALL," and for all the passengers and crew she has provided an inexhaustible "TEMPLE" of *materia medica*. She carefully guards the health and activity of all concerned with a "HAWKES" critical eye. Her capacity for carrying "COLE" ensures solid comfort and warmth, with facilities for cremation instead of burial in the event of any death on board; and withal, she has an experienced "WHEELER" at the helm who understands his duty so well that she fears no disaster from rock or shore. In short, she has a well-trained expert who provides eyes for the blind and ears for the deaf; and another who, in case of accident, looks after fractured limbs and joints, and who is master of the scalpel and knife in the excision of tumors, excrescences, and morbid growths. Never was a ship better provided with all the appointments necessary for any and all emergencies to insure a successful voyage than Hahnemann Medical College of Chicago.

The Quartette then sang, "*Our Ship now goes with a pleasant gale.*"

After which THE PRESIDENT called upon Dr. D. S. Smith to respond to "Our Board of Trustees." Dr. SMITH said:—

LADIES AND GENTLEMEN:—

It has fallen to my lot to respond to the toast on behalf of the Trustees of Hahnemann Medical College.

It is unnecessary here to pronounce encomiums on the gentlemen who are the Trustees of this Institution: they are too well known and appreciated to require any eulogism at my hands, as the mention of their names will manifest, viz: Hon. Thomas Hoyne, Judge Van H. Higgins, E. H. Sheldon, Esq., Hon. J. Y. Scammon, Edson Keith, Esq. Christian Wahl, Esq., R. L. North, Esq. I omit the names of the three M. D.'s, they are in the minority and known to you.

The trustees have ever treated the faculty with respect and consideration, doing only that which they deemed at the time for the best interests of the college, and if their action had not always been properly appreciated by the professors, the fault was not with the trustees. True, sometimes appointments of teachers have been confirmed by them which have subsequently proved not to have been for the best interests of the College; those errors were due to the requests or nomination of the faculty.

But the Hahnemann, like other organizations, had to pass through the stage of infancy and youth, together with the diseases incident thereto, not even escaping the mumps, and as it approached mature years was attacked with the small-pox. It passed its several stages, and, by the skill of the attending physicians, when exfoliation took place no scar remained. And now behold her in strength and purity, with nothing to mar or retard her vigorous growth, nor to compromise the position she has now attained in the front ranks of the medical schools of this country.

Connected with the College from its commencement, I feel justified and am glad to be able to say that at no time in its history has its condition been as prosperous as now. I am informed the last class was the largest ever in attendance, and of that intelligence and respectability which so generally characterizes Homœopathic Medical Students.

Unity of action and fraternal regard now obtain throughout the faculty, and I assume to speak the sentiments of the trustees when I say they have full confidence in the integrity, intelligence, and eminent qualifications of the former to fill the several chairs with credit to themselves and honor to the College, and that the course of lectures last winter was the best ever given. I doubt not the trustees in the future, as in the past, will co-operate with the professors to promote the best interests and prosperity of the College.

They hope and confidently expect the profession, and the Alumni who have a regard for the best interests of the Homœopathic profession and the advancement of this great school of the northwest, will earnestly strive to increase the number of students in attendance next year. And now we thank you, and through you the profession, for the active interest you have taken in the past and are now taking in behalf of Hahnemann Medical College.

"The Homœopathic Hospital" being the next toast in order, Prof. HALL was called upon, and said :

**MR. PRESIDENT, LADIES AND GENTLEMEN :—**

It affords me great pleasure and satisfaction to be privileged, in the presence of these assembled friends, to respond to this toast. As one may, with honest pride, speak of great men and their noble deeds—so can I speak of "Hahnemann Homœopathic Hospital."

It is an institution unpretentious in its outward appearance, and unendowed. Still it has been liberally supported by public and private charity, and has a cheer within, an air of comfort and ease, so grateful to the needy and afflicted who find a safe refuge in its spacious wards. It is here the distressed find relief, and the sick are tenderly cared for, and skillfully treated by the ever attentive *Hospital Staff*.

This being the only Homœopathic Hospital in the State of Illinois, it justly claims the support and protection of all well-disposed members of our profession. With their co-operation, in sending patients and soliciting succor from their generous patrons, its use may be greatly increased, and its facilities for doing good largely multiplied. It is now recognized as the leading Clinical Hospital of our school in the great west, and by the united effort of all charitably disposed persons, it will not only become the pride of our own state, but an institution admired by the Homœopathic profession throughout the world. It is for no selfish end or self aggrandizement that the Hospital Board struggled to build up this asylum for the sick. They have no party plan or policy to be carried out. Their only desire being that of building a home for the worthy sick poor—at the same time a place for clinical observation of Homœopathic treatment—for this reason they have established a Clinical Society, in connection with the Hospital and Hahnemann College.

To the Medical student, our Hospital affords rare advantages for Clinical observation, adding much to the popularity of Hahnemann College as a Clinical School.

In the Hospital there are six large wards, well furnished and in perfect running order, besides a large number of private rooms for private patients. In the General Lying-in Ward over sixty cases of confinement have occurred during the past season, offering the finest Obstetric Clinic in America. The department for Diseases of Women, for Clinical Medicine, Diseases of Children, the Surgical Ward, the Department for Skin Diseases, and the Eye and Ear Department have been well filled; and as these students before me will bear testimony, they have all furnished their quota of clinical material.

It is withal, a great pleasure to witness the growing popularity of this institution under the present administration, and we feel confident, upon the sound financial basis which it is now placed, it will stand as a rock, unmoved by the waves of adversity—a monument of charitable deeds—a haven of rest to weary, sick mortals, where the benign influence of the law “similia similibus” may be demonstrated to the entire satisfaction of the medical world.

The Quartette then sang “*The Toast. Health to the Fairest,*” when THE PRESIDENT called upon Prof. HAWKES to respond to “Our College Dispensary.”

Prof. HAWKES spoke substantially as follows:

#### LADIES AND GENTLEMEN:—

In response to this sentiment I can say that “Our Dispensary” is in a most flourishing condition. It carries the weight of its 21 years with a wonderful elasticity, its strength increasing with its years. And I will venture the assertion that never a winter during its beneficent existence has more good been done within its hospitable walls than during the season just passed. The removal of the County Hospital to the extreme western limits of the city has more than doubled the number of our outpatients. Order has been wrought out of comparative chaos, new and complete stocks of medicines have been placed upon its capacious shelves, and every thing that can conduce to the recovery and comfort of the patients has been provided without regard to expense.

Many remarkable cures, especially of chronic diseases, have rewarded the efforts of the physicians in charge. On the other hand, the varied, unlimited, and excellent quality of the clinical material always on hand has furnished to the unusually large classes of students attending Hahnemann College and Hospital facilities for practical learning unsurpassed by any similar institution in the country.

While the sick traveling this particular road to health may have found the way at times rather “ROCKEY” and, as yet, barren, still to them it has been smooth and pleasant; and while the cholagogues, emmenagogues, and demagogues of the more “heroic” schools have frequently anticipated the coming of the old man with the scythe, they have found that our “PILLSBURY” none.

The dust of disuse has been brushed from the brow of old Hahnemann, and his spirit once more directs the dispensing of the remedies which

his great genius and marvelous labor have placed within our reach. So that the word "Hahnemann" has now some significance in connection with this Institution, and is no longer a burlesque or an empty name. And, if I may be allowed to don the mantle of a prophet, I predict that so long as his spirit—mentally, morally, and professionally—rules the powers that be, pre-eminent harmony and success will follow and crown the work.

Prof. HAWKES having concluded, it was announced that "Our College Property" would be next in order, and THE PRESIDENT called on Prof. HOYNE, who said:

**MR. PRESIDENT, LADIES AND GENTLEMEN:—**

In response to the toast just read, I will state briefly that the property of the College remains just as it has for a number of years. Owing to the general financial depression of the times the property probably is not worth as much in cash as it was some years ago, but the prospects for the future are much brighter. In regard to the mortgages on the property, they have neither been increased nor diminished during the last six or seven years. But a subject which is much more to the point, is that the College has no floating debts, and that the balance in the hands of the Treasurer at the end of the winter session of 1876-7 was much greater than at the end of the course of 1875-6. Although the fees were reduced 35 per cent. last year, the increased number of students attending the institution—the largest number in the history of the College—has given us a larger balance over expenses than a year ago, or ever before.

The prospects for '77 and '78 indicate that the next class will greatly surpass the last in point of numbers. The improvements contemplated during the present summer, will give us the finest and most comfortable lecture-room in the west.

Prof. COLE then responded to the toast of "The College Museum," speaking as follows:

**MR. PRESIDENT:—**

Although but little has been said about the Museum of late, it has been quietly but rapidly developing, and has already become one of the objects of interest.

During the past year we have fortunately come in possession of a number of interesting specimens, both Anatomical and Pathological, such as are seldom found in any similar collection.

We have an abundant supply of material for the illustration of Anatomical lectures, and a large number of wet and dry preparations for the Medical, Surgical, and Gynecological departments.

We hope the members of the profession who have so very kindly contributed in the past, will not only continue in the good work, but stimulate others to do likewise, that we may soon have a Museum that will surpass any other. Through you we solicit their aid in the future.

**MR. E. S. BAILEY**, of New Jersey, followed with a very neat speech on behalf of "The Class," which was warmly applauded by the students.

The Quartette then sang another piece most delightfully, when it was remarked that "Our Eye and Ear Clinic" was the next toast in order, and Prof. VILAS was called upon to respond.

Prof. VILAS spoke as follows :

**MR. PRESIDENT AND FELLOW-STUDENTS :—**

After such a thorough and pleasant attack as has been made on both your eyes and ears this evening, I shall not attempt to add much more, simply remarking that to the familiar faces I see before me it is unnecessary to say much concerning the Eye and Ear Clinic, or to recount the trials and discouragements we have endured in establishing a successful one in connection with our Hospital.

Many of you have seen it rise from a few straggling dissatisfied outpatients, to its present position, so that during the term just closed, we have been enabled to present to you typical cases of the diseases incident to the season of the year in this climate, as well as rare and instructive chronic troubles. It is with pride that I would remind you not only that you are admitted to the only Homœopathic Hospital in the northwest, but that our Hospital is the only institution having full and capacious wards appropriately fitted up for the comfort of large numbers of patients convalescing from surgical operations, a separate department being provided for those of the Eye and Ear.

As during the past sessions, so in the future ones it will be the aim of this chair to present, clinically and didactically, those practical points needed in the every-day routine of a physician's life, to the entire exclusion of the specialist's instruction or personal display. To those who desire a more extended knowledge than is needed by the general practitioner, ample opportunity will be afforded, but all such instruction will be optional.

Fully believing that as each cycle of time goes round, persistent, earnest effort can but bring increased success, let the past record be our guarantee for future intentions.

In conclusion let me remind you that this clinic, like all others in our Hospital, is now on a permanent foundation, and continues the year round. You will always find its surgeon in attendance, and you and all professional friends will always be welcome.

**THE PRESIDENT** then called on Prof. WHEELER to respond to "Our Chemical Laboratory."

Prof. WHEELER spoke as follows :

**LADIES AND GENTLEMEN :**

You who have been in attendance upon the Spring Course at the Hahnemann Medical College will not need to be reminded that the Chair of Chemistry has had under consideration, during that time, the question of "Food in its Chemical Relations," including its composition, both proximate and ultimate; the relative value of the different kinds as nutriment, and the theory of its proper preparation by cooking or other-

wise. After so much on these subjects in the course just concluded, to then invite you this evening to a farther and experimental consideration of the food question, expecting from you appropriate manipulation and original research, equipped with knife, fork, and spoon—in lieu of blow-pipe and test-tube—with regard to the viands before you, including their analysis and synthesis, ending with their complete precipitation into the alimentary canal, is, to say the least, giving the department of chemistry an altogether undue prominence. I feel, therefore, I need not inflict a speech upon you. It is, however, but just for me to say that the zeal and fidelity exhibited by you in my department, and the results accomplished have certainly been most creditable. It has been a Spring Course most worthy to follow so prosperous a Winter Session as that of 1876-7.

The course in Chemistry the coming Winter will be unlike those of previous seasons, inasmuch as the lectures are to be divided into two divisions or sections. The one will include Inorganic Chemistry, and be much as the last as to its scope, though we hope it will be somewhat improved in several minor particulars. The other section will cover the subjects of Organic Chemistry, Physiological Chemistry, Chemical Biology, and Toxicology. This session will be particularly adapted to the requirements of medical students, especially those who have already pursued the study of Inorganic Chemistry, which is the general foundation in the systematic study of the science. There will thus be a rational and progressive plan pursued such as is believed will accord with the most modern ideas in scientific study.

At this point MR. J. K. MULHOLLAND, of Indiana, offered a series of resolutions from the Class, expressive of the universal satisfaction on behalf of its members with the course of instruction just closed; which, after being seconded in a capital speech from DR. ISAAC PRINCE, of the West Indies, were unanimously adopted with much enthusiasm.

*"How Can I Leave Thee,"* was then sung by the Quartette.

THE PRESIDENT then announced the last toast, "A Limited Faculty and Better Teaching," and called upon Prof. LUDLAM to respond, who said :

#### MY FRIENDS:—

I have heard of an old fellow, living in New Jersey, who, after a good dinner and a few sips of native champagne, was called upon for a speech. He began by saying that he "had been to the Fourth of July hundreds and hundreds of times, but that he had never seen one like that before!" For thirty years not a twelve-month has passed in which I have not participated in the closing exercises of a medical college of some sort—regular, irregular, or defective—and I can truly say that I have never seen one like this before!

Under the old dispensation, when our faculty consisted of from twelve to twenty persons—men, women, and children—I have often heard it said that the Spring Term was a nuisance, that it should be abated, and that it did not pay to lecture after the Winter Session had

closed. But the times are changed. Then the class was so small that there were more professors(!) than pupils; then more subjects were brought into the lecture-room than our resurrectionist could furnish up stairs; the lecturers threshed the same old straw over and over again, and the listeners were often bamboozled with the idea that they were learning something which would be of real service to them. But now that the sentiment of this toast has been assimilated, we have the best evidence of increased vigor and strength of growth for the present, and of promise for the future of our College.

Only a year ago, under the incubus of which I have spoken, our eighteen pupils "folded their tents like Arabs, and silently stole away." Now, with a class of *fifty-two* students (exclusive of dead-heads, and wooden ones, of which there are none), and a limited Faculty of *eight* responsible teachers, we are assembled to celebrate the closing exercises of the Spring Term for the year 1877.

The practical result of this reform in the system of medical teaching could not have a better or more forcible illustration. When our Board of Trustees adopted the motto which calls for "*A Limited Faculty and Better Teaching*" they knew exactly what they were doing. They knew that a physician who is saturated with the knowledge which he can utilize and apply at the bed-side, will do more good in his profession and reflect more credit upon the institution which he represents, than one who has wasted his time on non-essentials and merely skimmed over the surface of medical literature. And I honor them, and thank them, for coming to the rescue of medical education in this great Northwest.

The Greeks attributed the purity with which they wrote their beautiful language to the fact of their not studying any other. \* \* \*

Pascal, in his XVIIIth letter, says of it, that he would have made it shorter if he could have kept it longer. It is possible some of our medical faculties will be made shorter when they have been kept a little longer!

Now, my friends, you know, and we all know, that the instruction which you have received has been of the most thoroughly useful and practical kind. We have taken you to the bed-side, and to the operating-table, and given you such direct and personal instruction as you are certain to need. Every one of you has been brought face to face with the forms of ill-health that you are sure to encounter. You have been drilled, not like the law-student in a sham court, but in the hospital ward and at the sick couch, and our hints and your study have helped you to make the greatest possible progress. And I am certain that, as the presence of a gentleman will always create a taste by which he himself will be appreciated, so you will create an atmosphere about you which will be redolent of blessing to the race, and of honor to this Institution.

On ship-board it is never noon until the Captain "makes it so." In due time the worthy President of this College and Hospital will be ready to give you the degree as a reward of merit. Daylight does not come or go with a rush; but it will be high noon bye-and-bye. \* \* \*

THE PRESIDENT then announced that the Eighteenth Annual Course of Lectures would begin, as usual, early in October; when the assemblage dispersed.

# REGULAR CLINICS

ARE HELD AT THE

## HAHNEMANN MEDICAL COLLEGE

AND

## HOMEOPATHIC HOSPITAL,

OF CHICAGO,

THROUGHOUT THE YEAR ON THE DAYS STATED BELOW. THERE IS NO VACATION.

Numerous Special Clinics are held at other times, especially during the lecture terms, according to the requirements of patients, the hours for which may be learned on inquiry at the office of the resident physician at the hospital, they varying as emergency demands.

The Hospital is located on Cottage Place, the entrance being from the College grounds, 287-291 Cottage Grove avenue, and is readily accessible from all parts of the city by the Cottage Grove avenue cars. These cars may be taken anywhere on Wabash avenue or State street, and pass the door of the College.

A cordial invitation is extended by the Faculty of the College, and the Medical and Surgical staff of the Hospital, to all members of the profession to be present at these clinics, and see for themselves the manner in which they are conducted, as well as to examine the large and varied classes of cases presenting for treatment and operations.

JUN 25 1956

### REGULAR CLINICS.
